# Active Again

Thanks to Robotic Laser Therapy

## Robotic Laser Therapy: why?

- To overcome the painful symptoms, typical of the musculoskeletal system
- A valuable tool for rehabilitation that promotes the recovery of the functions that were compromised by surgery or fractures
- To come back in a short time to the normal activities of everyday life such as work, sports and social life

## Safe, non-invasive and painless, Robotic Laser Therapy is safe effective for the following conditions:

- |                      |                       |                     |
|----------------------|-----------------------|---------------------|
| ● Arthritis          | ● Hematomas / Oedemas | ● Muscle lesions    |
| ● Brachial neuralgia | ● Hip pain            | ● Plantar fasciitis |
| ● Bursitis           | ● Joint pain          | ● Sciatic pain      |
| ● Cervical pain      | ● Knee pain           | ● Sores             |
| ● Contusions         | ● Lumbar pain         | ● Tendonitis        |
| ● Dislocations       | ● Muscle Contractures | ● Ulcers            |

## In a rapid, long-lasting and successful way.

- Reduced number of applications
- Fast treatment times (from 3 to 10 minutes)
- Simultaneous action on the pain-inflammation-edema triad.

A technique created to overcome  
the limits of traditional Laser Therapy.
